

Our Mission

EC Pigments is a creative, customer-focused manufacturer of speciality organic pigments providing superior quality and service worldwide.

Policy Statement

EC Pigments is committed to minimising the environmental impacts of both our operations and products as outlined in this policy statement.

In addition to complying with relevant legislative, regulatory and other requirements, we will manage our products, processes, and workplaces to minimise any significant, adverse effects to the environment using procedures, which are complementary to our ISO 9001:2000 QMS, and comply with the requirements of ISO 14001:2004.

As part of the development process, new products will be designed to minimize, as far as possible, their overall environmental impact.

We will monitor and review the environmental performance of our sites and establish objectives and targets against which we will strive to achieve continual improvement. A key business objective of no environmental excursions will remain part of our Zero Standards programme.

Whenever possible we will ensure that our processes and products make best use of recovery and re-cycling to prevent pollution, reduce waste and resource consumption.

Our people will be trained in the requirements of ISO 14001:2004.

We will encourage our suppliers to adopt the use of Environmental Management Systems, for example, by assessing the suppliers' commitment to protecting the environment before evaluating their products.

This policy will be communicated to our people and is available to our shareholders, the public, our suppliers, our contractors and our customers.

This Policy will be reviewed and revised at regular intervals.

Signed 
Acting Managing Director
